

Evidence of Evolution: Fossils

Interactive Lesson

PRINT and DIGITAL

Archaeopteryx

"ancient wing"

- Scientists believe this is a transitional fossil showing a link between dinosaurs and birds.
- has **characteristics of modern bird**: feathers and a wishbone
- has **characteristics of other theropod dinos**: teeth and long bony tail

Limitations to the "Horse Sequence" as Evidence

There are some arguments against the use of these fossils as evidence for evolution.

Examples include, but are not limited to:

- Even today, horses vary greatly, yet they are still of the **same kind**.
- Three-toed horses and one-toed horses **coexisted**.
- There are **gaps** in transitional forms.
- The *Eohippium* is a **mammal**.

A key is also included!

Drag the circle to the correct response.

Fossils can show us:

- how organisms change over time
- anatomy and behavior of organisms
- organisms that have become extinct
- all of the above

Drag and Drop

Drag the circle to the correct response.

All of the preserved remains, traces, and imprints of past life forms that have been discovered are called:

- the fossil record
- transitional fossils
- dating fossils
- snapshots

Drag the arrow to the correct answer.

Trilobites lived for over 270 million years.

True

False

Type in the Text Box

Agree or Disagree?

Directions: Write agree or disagree in the blanks.

1. The fossil record is incomplete and contains many gaps.

Type here

2. Fossils are kept at various institutions such as museums, universities, and research centers.

Fossils are kept at various institutions such as museums, universities, and research centers. Click [here](#) to search through and explore the paleobiology collections at the Smithsonian National Museum of Natural History.

3. There is support

In the text box below, describe the most interesting thing that you observed during your exploration.

Type here.

and more!

In the text boxes below, in the 1st Column, type in what you already KNOW about the fossil record as evidence of evolution. In the 2nd column, type in what you WANT to learn about the fossil record as evidence of evolution. The last column will be completed at the end of the lesson (what you've learned).

• Type here.	• Type here.	

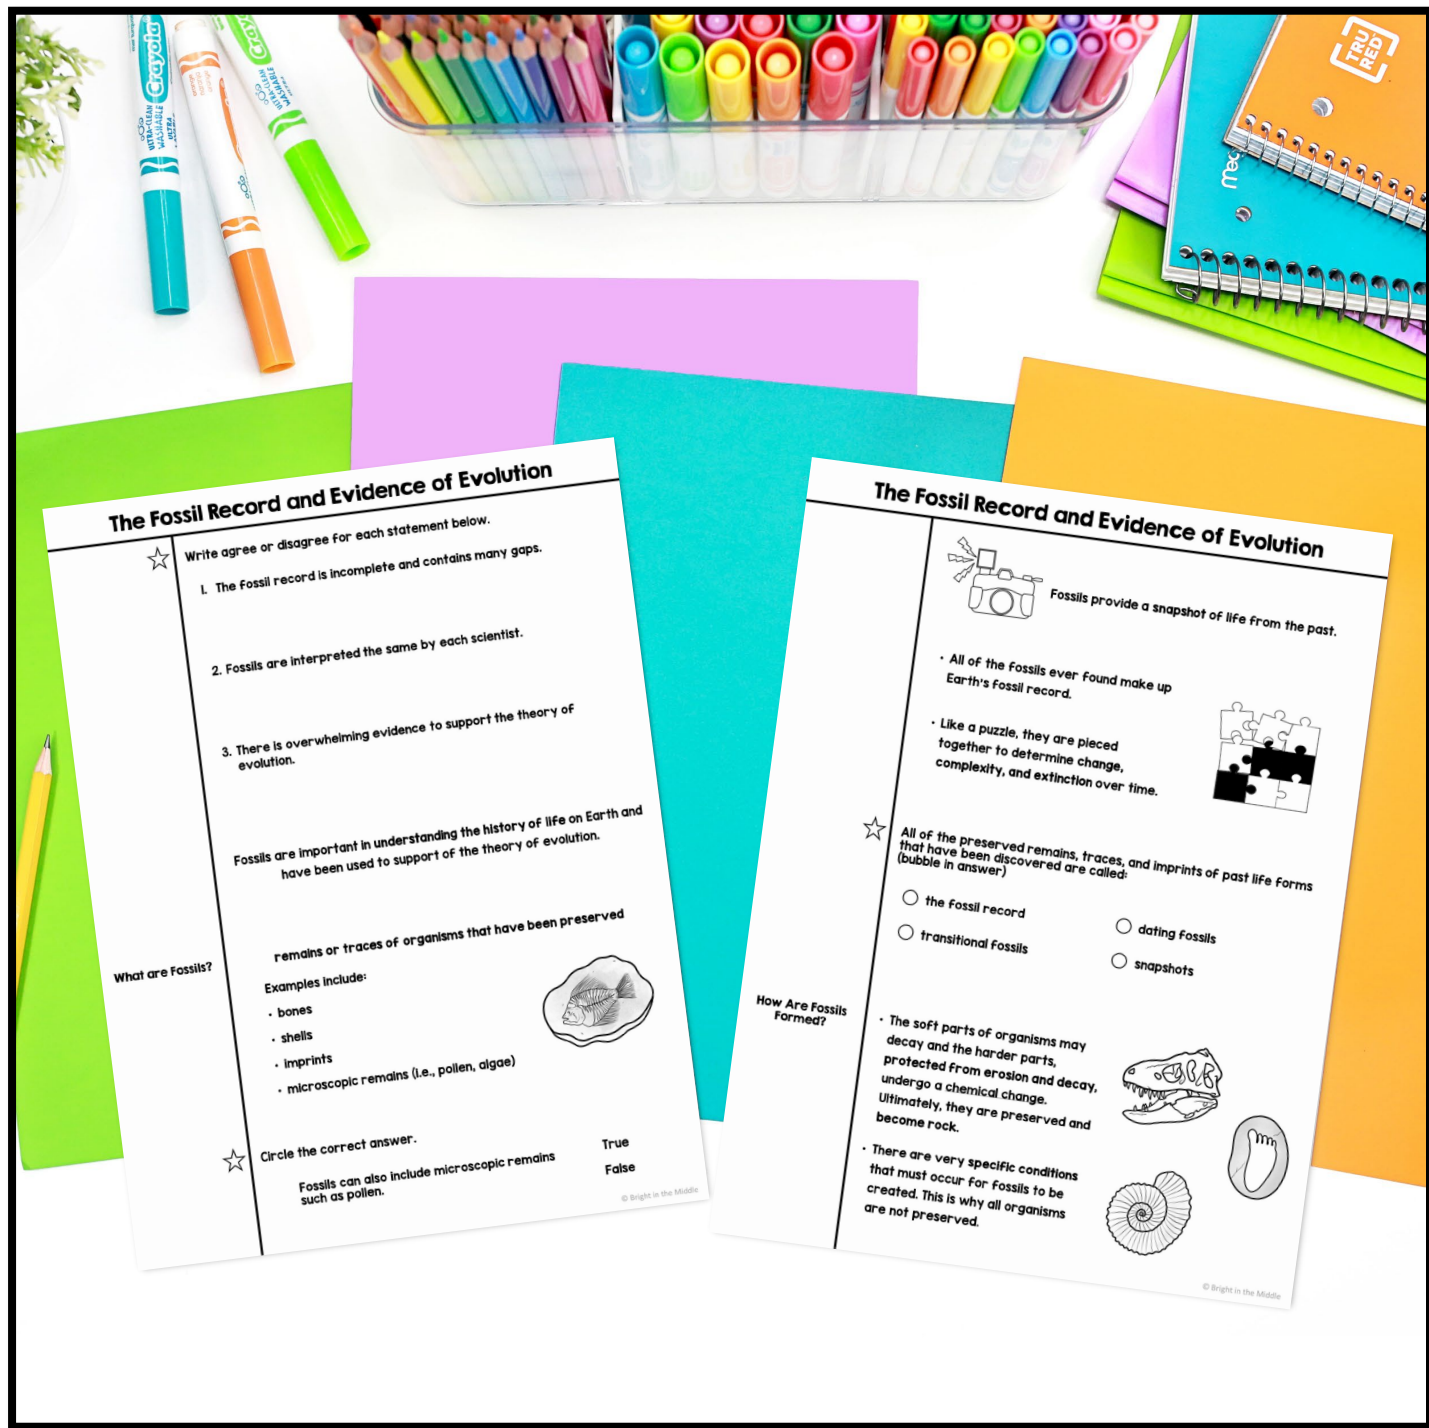

Last Slide

There are two broad types of geologic dating to determine the ages of fossils:

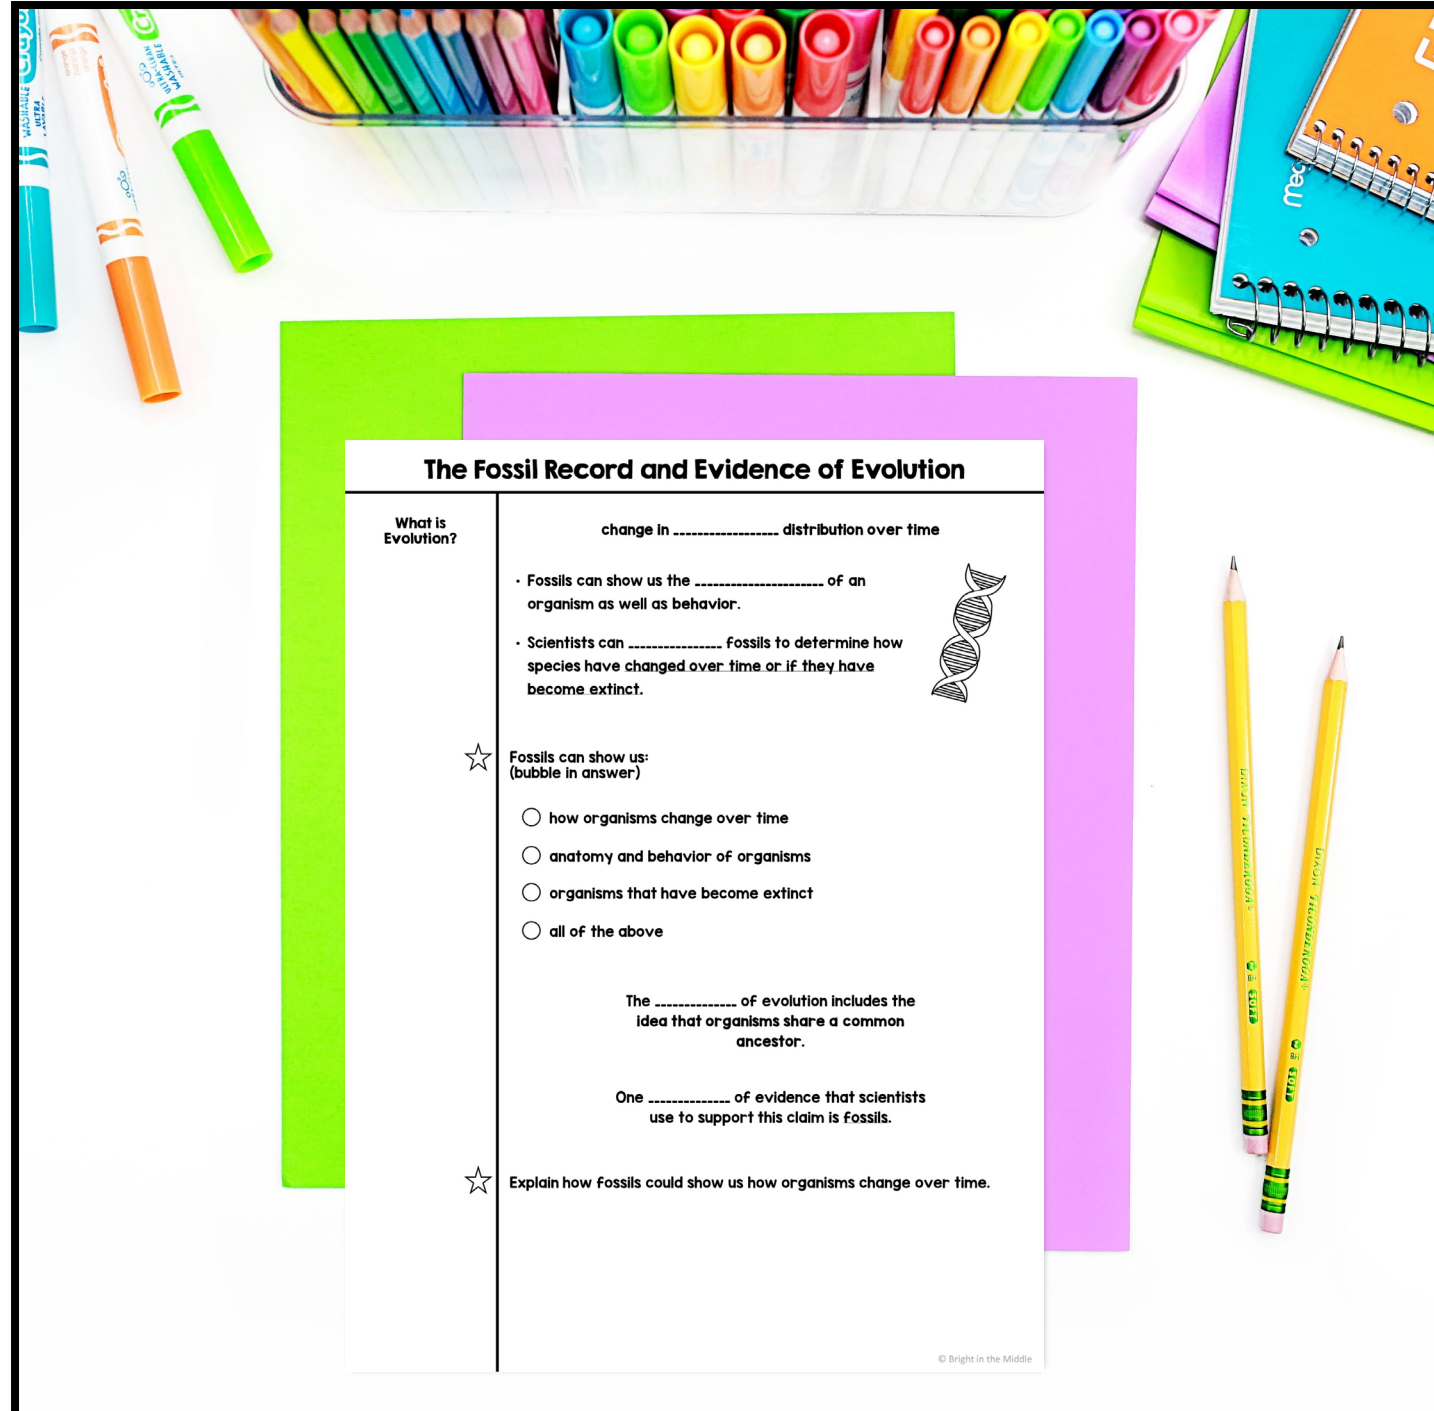

- **relative dating:** looking at position in the rock record
- **absolute dating:** using techniques to determine the exact age

A paper version is also included with interactive activities embedded.

The Fossil Record and Evidence of Evolution

What is Evolution?

change in distribution over time

- Fossils can show us the of an organism as well as behavior.
- Scientists can Fossils to determine how species have changed over time or if they have become extinct.

☆ Fossils can show us:
(bubble in answer)

- how organisms change over time
- anatomy and behavior of organisms
- organisms that have become extinct
- all of the above

The of evolution includes the idea that organisms share a common ancestor.

One of evidence that scientists use to support this claim is fossils.

☆ Explain how fossils could show us how organisms change over time.

Ways to Use Digital Interactive Lessons

Science digital interactive lessons are a great way to teach or review science content with your students for many reasons.

They are fun. They are engaging. Another reason, which I think is the most important, is that they help decrease the cognitive load. The way that digital interactive lessons are set up is first, a little bit of content, and then practice with that content, and repeat the process.

Students can digest small chunks of information a little at a time, apply that information, and then learn more! This will help keep their attention.

So, now, what are some ways that you can use them in your middle school science classroom?

Individual Learning

One way that interactive lessons can be used in the classroom is just for individual learning. These are digital lessons, so students can pull up the lesson on their computer, either via Google Classroom, Microsoft Teams, PowerPoint, or whatever you use in your classroom.

Students read through the lessons themselves and **work through the practice** at their own pace.

The benefits of doing this are that students can work at their own pace and you, as the teacher, can walk around the classroom as they are learning to answer any questions that they have. In addition, you can see what that particular student is learning. As you walk around the room and view their work, you can use it as a formative assessment to see if they are understanding the material.

You can also bump it up a notch. Since students will be working using the computer, you can embed related YouTube videos in the lesson for extra enrichment!

INDIVIDUAL LEARNING

Distance Learning

Digital interactive science lessons are a great tool to use for individual learning at a distance for the middle school science classroom.

Students can read through the material, and after digesting chunks at a time, they can apply the information with embedded practice slides.

After completing the lessons, students can submit their work to their teacher.

DISTANCE LEARNING

Small Groups/ Partners

This works similarly to having students working as individuals except that students have the opportunity to work with one another. I think that this an awesome approach to differentiated learning in the classroom.

In small groups, or in partners, students are able to read the lesson together, discuss each practice slide, and apply the information together.

I prefer this method in many ways because I believe in the power of cooperative learning. As a teacher, you still have the opportunity to walk around and help the individual students as needed, but students also have each other for support.

PARTNERS**

Direct Instruction

As mentioned, digital interactive lessons are set up as a lesson with embedded practice to help decrease the cognitive load. If teachers choose to, they can pull up the lesson and teach it to their students and still take pieces of content and digest them bit by bit.

For example, when teaching about **pedigree charts**, the teacher can first discuss what a square and a circle represent in a pedigree chart.

DIRECT INSTRUCTION

After students digest this material, the teacher can ask students to discuss how they will remember this information and then apply the information in practice.

Science Centers

Digital interactive science lessons can be used in one of two ways for science centers. First, science centers on a particular topic. For example, say you are teaching distance-time graphs, and you are ready for students to complete science centers on this topic. You can have a center for a [digital interactive lesson](#) (make groups in Google Classroom, or another platform), [task cards](#), [story match](#), and a reading passage.

SCIENCE CENTERS

Another way that you can use interactive science lessons for science centers is only using digital interactive lessons. Time to review for a [genetics](#) test? You can have stations set up where students will move around the room.

They can work through individual lessons such as Gregor Mendel and an Introduction to Genetics, Asexual and Sexual Reproduction, Mitosis and the Cell Cycle, Meiosis, Punnett Squares, Pedigree Charts, and Variation of Traits and Genetics Disorders. This route may take more than one day. It just depends on how long your classes are and how much time you can devote to review. I personally like the first approach to using digital interactive lessons as a science center.

For ELL Students

With technology, there are so many awesome opportunities for students that do not speak English as their primary language to learn science content in schools that speak predominantly English. That goes vice versa as well. If you are trying to learn in any language you are unfamiliar with, technology is here to help!

There are many options that students can use to learn science material. As a teacher that only speaks English, you can imagine how difficult it is to teach a student that speaks another language. I'm sure there are other teachers out there with the same dilemma.

for

ELL STUDENTS

With technology, I have been able to give my students the science lesson and have them use Google translate in order to understand what the lesson is saying. Now, I'm working on creating digital science lessons in Spanish, so that one step is taken out.

Enrichment/ Tutoring

I know that many schools set up a time during the day just for enrichment/tutoring.

Digital Science
INTERACTIVE
Lessons
for

**ENRICHMENT/
TUTORING**

Many schools only set up this time for reading/math, but some do science too! Especially those that test in science. Interactive lessons are a great way to review standards-based science material and practice!
