Name _____

Biomes

In the spaces below, in the 1st Column, write what you already KNOW about biomes. In the 2nd column, write what you WANT to learn about biomes. The last column will be completed at the end of the lesson (what you've learned).

Biomes

What are Ecosystems?

community of organisms that interact together and with their environment

- _____ and interactive
- **abiotic and** _____ components
- energy and nutrients flow throughout

☆ Circle the correct answer.

Organisms in an ecosystem interact with their environment.

True

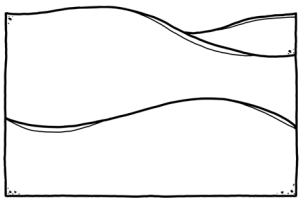

False

An ecosystem includes _____ biotic and abiotic factors (living and nonliving parts) of the environment.

Components in Ecosystems

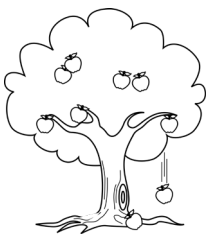

_____
nonliving

Examples:
- water
- soil
- sunlight
- temperature

Biotic
living

Examples:
- polar _____
- grass
- apple tree
- grasshopper

The abiotic and biotic factors _____ **together to establish balance** in the ecosystem.

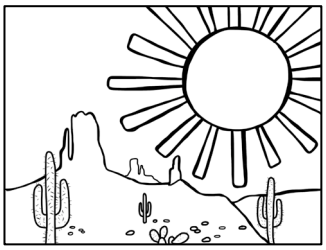

© Bright in the Middle

Biomes

☆ Describe the difference between abiotic and biotic factors in an ecosystem.

Biomes

---------- area characterized by a specific climate, vegetation, and animal life

- large group of ---------- ecosystems
- similar plants, animals, and ----------

5 Major Biomes

- **Aquatic**: freshwater and ----------
- **Grassland**: tropical grasslands (savannas) and temperate grasslands
- **Forest**: temperate, tropical, and boreal (----------)
- **Desert**
- ----------

☆ A large area characterized by a specific climate, vegetation, and animal life is called a(n):
(bubble in answer)

◯ biome ◯ ecosystem

◯ climate watch ◯ community

© Bright in the Middle

Biomes

Aquatic Biomes

---------- and marine

Freshwater Biome: water with a ---------- level of salt

Animals

- ----------
- frogs
- turtles
- otters
- beavers
- snakes
- alligators

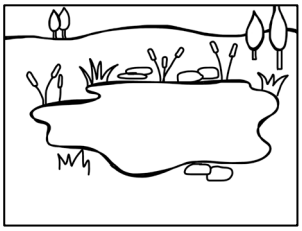

Plants

- water lilies
- algae
- duckweed
- eelgrass
- cattails
- ---------- mosses

ponds and ----------, streams and rivers, wetlands

- water temperature varies by season
- cooler at the bottom of lakes and ----------
- influenced by surrounding terrestrial climate

☆ Circle the correct answer.

Freshwater biomes are not influenced by the terrestrial environment around them.

True

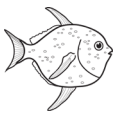

False

Marine Biome: oceanic ecosystem - about ---------- of Earth's surface

Animals

- fish
- sharks
- dolphins
- whales
- corals
- jellyfish
- sea ----------

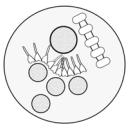

Plants

- phytoplankton
- algae
- ----------
- coral polyps
- seagrasses
- sea lettuce

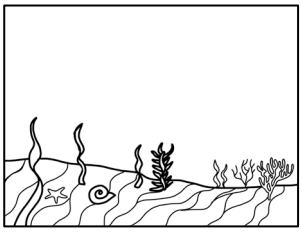

---------- biome on Earth

oceans, coral reefs, estuaries

- oceans have more stable temperature
- influenced by ocean currents and ----------

© Bright in the Middle

Biomes

☆ Explain why you think freshwater biomes and marine biomes have different animal and plant life.

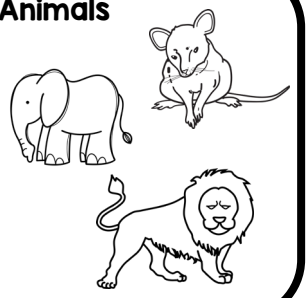

Grassland Biomes

_____ grasslands (savannas) and temperate grasslands

Tropical Grasslands (Savannahs): hot and _____ climate

Animals

- _____
- snakes
- zebras
- giraffes
- elephants
- lions
- cheetahs

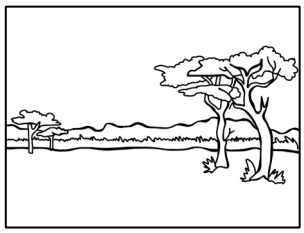

Plants

- _____ grasses
- baobab tree
- acacia trees

- found closer to the _____
- warm to hot climate
- distinct wet and dry _____

☆ Which of the following does not apply to tropical grasslands (savannahs)?:
(bubble in answer)

- ◯ Baobab trees are found here.
- ◯ The climate is warm to hot.
- ◯ There are distinct wet and dry seasons.
- ◯ They are found far from the equator.

Biomes

Temperate Grasslands: vast, flat areas of land with a growth of grasses

Animals

- ----------
- rabbits
- bison
- pronghorns
- coyotes
- hawks
- prairie dogs

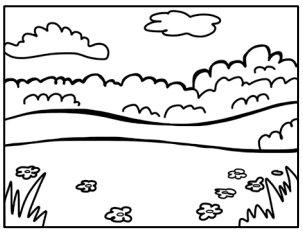

Plants

- buffalo grass
- wild ----------
- big bluestem
- purple coneflower

- ---------- growing plants and flowers
- not enough rain to support trees, too much to be a desert
- ---------- seasons with cold winters and warm summers

☆ Circle the correct answer.

There are a lot of tall trees in temperate grasslands.

True

False

Forest Biomes

temperate, ----------, and boreal (taiga)

Temperate Forests: has deciduous trees and ---------- seasons

Animals

- white-tailed deer
- squirrels
- birds
- bears
- ----------
- reptiles

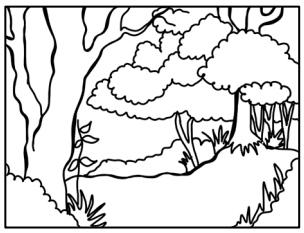

Plants

- deciduous trees like oak, maple, and beech
- shrubs
- ----------

- adequate rainfall throughout the ----------
- lots of water and nutrients available; lots of animals and plants
- can be found in ---------- with temperate climates

© Bright in the Middle

Biomes

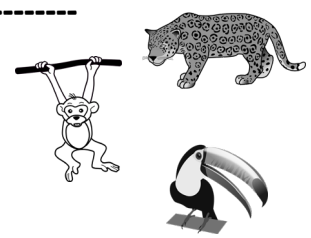

☆ Which of the following applies to temperate forests? (bubble in answer)

- ◯ There are two seasons.
- ◯ They can be found in cold climates.
- ◯ The majority of trees are coniferous.
- ◯ The majority of trees are deciduous.

Tropical Rainforests: vast _____; hot and humid

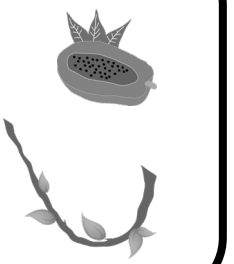

Animals

- _____
- birds
- lizards
- sloths
- bats
- jaguars
- insects

Plants

- canopy trees
- emergent trees
- _____
- fruit trees
- vines

- found in _____ climates
- lots of rain!
- important producer of oxygen
- includes _____ of the world's species

☆ Explain why there is a lot of biodiversity in rainforest.

© Bright in the Middle

Biomes

Boreal Forest (Taiga): coniferous trees; _____ and dry with long winters

Animals

- _____
- wolves
- lynx
- bears
- caribou
- elk
- porcupines

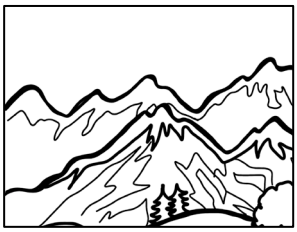

Plants

- coniferous trees like spine, spruce, and fir
- mosses
- _____
- azaleas

- cold and _____ region south of the tundra
- trees mostly cone-bearing and are green year-round
- found at _____ latitudes

☆ Circle the correct answer.

Boreal forests are found at higher latitudes and are often associated with cold winters.

True

False

Desert Biome

Desert Biome: dry; _____ cold and some warm

Animals

- _____
- desert foxes
- rattlesnakes
- scorpions
- desert tortoise
- lizards

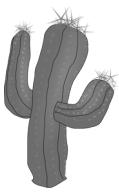

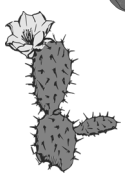

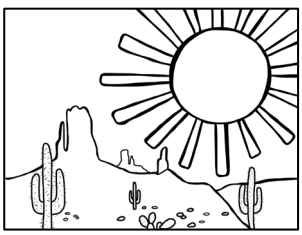

Plants

- cacti
- grasses
- _____
- small trees
- succulents

- extremely _____ rainfall
- wide temperature changes; very hot daytime to cold nights
- because of extreme conditions - not much biodiversity

© Bright in the Middle

Biomes

The desert is characterized by:

Circle the correct answers.

some cold and some warm	a lot of rainfall
dry	rich biodiversity

Tundra Biome

Tundra Biome: extremely _____; short, cool summers

Animals

- _____ foxes
- snowy owl
- caribou
- polar bears
- reindeer
- ptarmigan
- lemmings

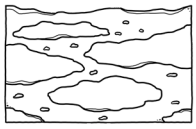

Plants

- _____
- lichens
- small shrubs
- small trees such as the dwarf willow

- long, _____ winters and short summers
- under topsoil, ground is frozen - permafrost
- few nutrients to _____ plants and animals

Which of the following is a characteristic of the tundra biome? (bubble in answer)

- ◯ high temperatures year-round
- ◯ dense forest with tall trees
- ◯ low-growing vegetation and permafrost
- ◯ frequent rainfall and a lot of greenery

Biomes

How Biomes are Classified

You may notice that _____ resources **label biomes differently**. The number and names of biomes can vary because scientists use different criteria to find them.

Biome research involves _____ sciences like ecology and geography, so it can be complex. As scientists learn more and use better tools, they **might change how they classify biomes** to better understand our planet's diversity.

Which biome do you live in?

Describe the most interesting thing you learned about biomes.

© Bright in the Middle

Biomes

Sort the following phrases into the appropriate category.
Draw/sketch animals and plants you may find in these biomes.

- very little rainfall
- bodies of water
- dominated by trees
- dominated by grass
- lowest temperatures

Aquatic Biome	Grassland Biome	Forest Biome	Desert Biome	Tundra Biome
